Readings in Educational Psychology—Edgar Stones 2012-05-04 The papers in this volume relate to the nature and conditions of classroom learning, with particular emphasis on the cognitive aspects. They are concerned with the question of concept formation and stress the importance of the teacher’s function in ensuring that the child really has assimilated the ideas and not merely the words for the concepts. The role of language is fundamental to this theme, and the interaction of language, thinking and learning is dealt with in the first section of the book. This section also provides a context within which subsequent discussions of classroom learning problems can be viewed. Some problems concerning the elaboration of a general theory of teaching are then examined with particular reference to possible methods of bridging the gap between research and implementation.

Special Educational Provision in the Context of Inclusion - Janice Wearmouth 2013-05-13 This text traces the development of special educational provision and goes on to concentrate on some of the key issues relevant to professionals currently working in the field. It looks at the recent drive towards inclusion and the implication this has for schools. In the present market context of education, there are a number of dilemmas facing schools that attempt to include all pupils and at the same time respond to the current focus on academic achievement in a national climate of competition and accountability. The book offers practical examples of ways to resolve these dilemmas at the level of the LEA, the school, the classroom and the individual child. It also illustrates how one Local Education Authority has tried to promote a policy of inclusion. Part Two introduces a discussion of the differences between pupils who attempt to put current national policies related to inclusion into practice and provides practical examples of whole-school and classroom initiatives to support the learning of groups of pupils and individuals within them. Included are chapters on professional development for teachers of special educational needs, classroom strategies for teacher and pupil support teachers and advice on differentiation, OFSTED and inclusive schools, the SENCO in the secondary school, and equal opportunities for all. How are reading disabilities assessed? How should reading disabilities be remediated? To what extent is remediation possible?) but from multiple or alternative perspectives. Taking incursions into the broader research literature represented by linguistic and anthropological paradigms, as well as psychological and educational research, the volume is on the
Handbook of Reading Research, Volume III

Michael L. Kamil 2016-11-18 In Volume III, as in Volumes I and II, the classic topics of reading are included—from vocabulary and comprehension to reading instruction in the classroom—and, in addition, each contributor was asked to include a brief history that chronicles the legacies within each of the volume's many topics. However, on the whole, Volume III is not about tradition. Rather, it explores the verges of reading research between the time Volume II was published in 1991 and the research conducted after this date. The editors identified two broad themes as representing the myriad of verges that have emerged since Volumes I and II were published: (1) broadening the definition of reading, and (2) broadening the reading research program. The particulars of these new themes and topics are addressed.

Understanding and Teaching Reading—Emerald Dechant 2013-09-13 In the words of Aldous Huxley, “Every man who knows how to read has it in his power to magnify himself, to multiply the ways in which he exists, to make his life full, significant and interesting.” Few people question the value of reading; in fact, most extol its virtues. As our culture becomes more complex, reading plays an increasingly greater role in satisfying personal needs and in promoting social awareness and growth. In the last 20 years, the teaching of this invaluable skill has focused so intensely on comprehension and prediction from context that it has lost sight of the significance of automaticity and fluency in the word-identification process. Reading is a synthesis of word recognition and comprehension; thus, this text is about these basic processes and their integration. A common plea from teachers today is that research and psychology be translated into teaching behavior. Therefore, the aim of this book is twofold: one, to identify, report, organize, and discuss those bits of data, research and theory that are most relevant to the teacher's understanding of the reading process; and two, to help educators to interpret and apply theory and research data to everyday classroom teaching, as well as to the problems encountered frequently in developmental and remedial teaching.

Visual Word Recognition: Meaning and context, individuals and development—James S. Adelman 2012

Word recognition is the component of reading which involves the identification of individual words. Together the two volumes of Visual Word Recognition offer a state-of-the-art overview of contemporary research from leading figures in the field. This second volume examines how research on word recognition has been linked to the study of concepts and meaning, such as how morphemes affect word recognition, how the meaning of words affects their processing and the effect of priming on the processing of words. The book also discusses eye-movement research, the reading of whole sentences and paragraphs, how bilinguals recognize words in different languages, individual differences in visual word recognition, and the development of visual word recognition difficulties in developmental dyslexia. The two volumes serve as a state-of-the-art, comprehensive overview of the field. They are essential reading for researchers of visual word recognition, and students on undergraduate and postgraduate courses in cognition and cognitive psychology, specifically the psychology of language and reading. They will also be of use to those working in education and speech-language therapy.
